Best Price and Quality!

Planet Digital Imaging provides our customers with leading edge technology capable of the best available quality for short run colour printing. We utilise Fuji Xerox DocuColor equipment for **short run digital printing** onto various sheeted papers; and an Agfa Sherpa 43 ink jet plotter for **one-off or small numbers of posters and signs** onto glossy white paper. For large volumes, traditional print techniques may still provide the most economical price. Planet customers can be assured that the most cost effective strategy will be selected to supply our best price and quality for each specific job. We have a variety of machines to handle anything from digital colour to full press publications, including bindery and finishing services plus mailing and distribution.

Do you need help?

Phone us on 02-9771 4711 and ask for a sales representative to visit you, come and chat with our graphic designers, or alternatively refer any file preparation questions to our Pre-Press Administrator.

- You may supply your own design on disk (*including all fonts, preferences and graphics required*), or
- You may prefer to take advantage of our professional graphic design studio's marketing skills

Type of Finishing: (Hole punched, folded size, stapled etc.)

Special Instructions:

Please Note:

Digital Imaging has maximum image area specifications which depend upon the paper size utilised. For example, an A4 piece of paper will not allow print to appear within approx. 3 mm from the edge of the paper. If the document requires imaging to "bleed" and extend to the edge of the paper, the next sheet size will be utilised and then trimmed to final size. More economical prices can be achieved from designs which do not bleed, or that will allow a white border around the sheet.
